

# How Do CAPC & CPNP Programs Impact the Health of Canadians?

## Preventing FASD

An estimated one in 100 Canadian babies -- about 4,000 a year -- is born with fetal alcohol spectrum disorder (FASD). Children presently living in Canada with FASD will cost the system \$300 - \$600 billion! **CAPC and CPNP programs work with vulnerable women to reduce drinking during pregnancy, and lower FASD rates.**
